3. Installation.....	1

1. What is Let's Encrypt

Let's Encrypt is a free, automated, and open certificate authority (CA), run for the public's benefit. It is a service provided by the Internet Security Research Group (ISRG). For more information visit: <https://letsencrypt.org/>

2. Prerequisite

Your Flexi server needs to be reachable on a DNS name over internet on port 80 and 443. When installation is complete you can close port 80. Download the tool "Win-ACME*" from: <https://github.com/PKISharp/win-acme/releases>

3. Installation

- 3.1 Run the ACME-tool from command with admin rights
- 3.2 Choose "New Certificate"
- 3.3 Choose "Manually input host names"
- 3.4 Type in the externally DNS name for your server
- 3.5 Choose IIS site for your certificate
- 3.6 Done

Your new certificate will be valid for 90 days, but automatically renewed after 55 days.
